- Wallwasher Option
- Easy Installation
- Customized Collector Design
  (Lenght - Arch Shape etc.)

A digital water curtain is an innovative display system that combines water, light, and technology to create captivating visuals. Using a program-controlled array of solenoid valves, it releases water in precise patterns, forming dynamic shapes, text, and designs as the water falls.

Enhanced with RGB wallwasher lighting, the curtain becomes a vibrant, interactive feature, capable of showcasing colorful effects and animations. This technology is perfect for modern architectural spaces, offering a unique blend of functionality and artistic expression in public areas, commercial buildings, or entertainment venues.
